KEY TO TABLE

(i) EBI = Economic Breeding Index (€). Indicates expected profit/lactation for bulls progeny compared to an average animal. (ii) Rel = Reliability of EBI proof. (iii) Dau = Number of Irish daughters in proof. (iv) Hrds = Number of Irish herds in proof. (v) Milk, Fertility, Calving, Beef, Health = EBI Sub - Indices. Added together, these give the overall EBI. (vi) M Kg = PD for milk yield. F Kg (Fat Kg), P Kg (Protein Kg), F % (Fat %), P % (Protein %). Bulls with + values will increase each of these production traits. (vii) FERT: CI = Calving Interval (Days). Negative values for CI = reduction in calving interval. (viii) SURV = Survival %. Positive values for SURV = increase in survival (longevity/herd life). (ix) CALVING: % CD = Calving Difficulty. Positive values indicates more difficult calvings. GL = Gestation Length. Positive values indicates increased gestation length. (x) BEEF: Cwt = Carcass Weight. Positive values indicates heavier carcasses. (xi) HEALTH: SCC = Somatic Cell Count. Negative values indicates reduction in somatic cells. (xii) TYPE: O FL = Overall Feet & Legs. O MA = Overall Mammary. Positive values indicates trait improvers for these traits.

Shaded bulls have Irish daughters included in Proof
