

Outlook 2000 Email Configuration

- In Outlook 2000 go to the Tools Menu – Select Services from the list. Highlight the Internet Email and click Properties as shown below.

- In the General Section of your email Properties make sure that you have the correct email address in the Email address and reply address fields as shown below.

- Now click on the Servers tab as shown below. Make sure that the incoming and outgoing mail servers are set to mail1.eircom.net or mail2.eircom.net for Eircom customers. If you use another provider please contact your provider and ask them for their incoming and outgoing server addresses.
- Confirm with your email provider that you are using the correct login account and password for your email address and enter these details below. For Eircom users the login account is your full email address. Check the option Remember Password so that you have to enter your password every time you try to download your email. Make sure the options below are not checked unless you are told otherwise by your Email Provider.
