cattle breeding group

## **GENE IRELAND® OVERVIEW**

- **High EBI young sires** - Speeds up Genetic Gain in your herd.  
Average EBI of this year's group of bulls will be ~€170, which is similar to best daughter proven bulls.
- **Straws Cost €5 per straw.**
- Bulls **chosen at random**, but will represent a range of sires and have an average EBI as close to the overall group as possible.
- EBI's for young bulls includes **genomic data**. Hence, higher reliability for these bulls.
- Straws must be used in assigned AI period.
- Herd-owners that use Technician service will still incur the cost of the 'arm service' and visit fee.

## **STRAW USAGE AND RECORDING INSEMINATIONS**

### **Full participation in Animal Events**

There is no particular requirement on how these straws were used. This is up to the discretion of the herd-owner. However, we do advise the following;

- Do not use the semen on heifers.
- Only one straw per oestrus period on each cow.
- All straws should to be used in current season (the Autumn season is defined as 1st September to 31st March).

The recording of all inseminations and calving performance ratings are critical to the success of the Progeny Testing Programme. This information is required for genetic evaluations for male fertility, gestation length, and calving difficulty calculations. This includes whether the cow repeats or holds to that service. This data can be sent in at the herd-owner discretion, just as long as ICBF have all serve dates on the database at the end of the season.

There are 4 methods of getting data onto the ICBF database:

- i) **Online recording through ICBF website** - log-on using Username and Password. Go to Event Recording > Record AI/Natural Service, and enter details accordingly.
- ii) **Farm Computer Packages.**
- iii) **Technician AI Handhelds** - Those herds that use the technician service, where their technician does not use the new handheld system, will need to ensure they get their insemination data to ICBF via one of the other methods.
- iv) **Animal Events book.**

## POTENTIAL BULL MOTHERS

### Do you have a potential Bull Mother in your herd?

For an animal to be considered as a bull mother they need to have the following:

- High EBI (> €140)
- 3 generations of recorded ancestry.
- Good fertility and protein production.
- Good functional type.

It's important to be aware of any high EBI cows in the herd and ensure they are mated to a high EBI sires. If you would like more information on the GENE IRELAND bull mother program, please contact 1850 600 900.

### FINAL WORD

Without more herds getting involved in GENE IRELAND® our target of testing 100 young sires each year will not be achieved. This will affect the progress in genetic gain of the national herd, as well as less profit in the back pocket of farmers!

## SUMMARY OF GENETIC INDEXES

**\*\*Note the genetic evaluation of the following bulls include Genomic.\*\***
