

Spring 2023

Gene Ireland Beef Sire Directory

Introduction

We are delighted to present you with the latest catalogue of beef bulls that are now available through the Gene Ireland program. The breeding program is a joint initiative between Pedigree Breeders, Commercial farmers, Breed Societies, AI Companies, DAFM & ICBF. The aim of the program is to progeny test high index beef bulls which will produce profitable cows for the suckler beef industry. The minimum criteria for a bull to be included on the panel is 5 Stars across breed on Replacement Index.

We have included a section dedicated to high Terminal Index bulls which are selected to produce profitable animals for sale or slaughter. The minimum criteria for a bull to be included in the Terminal section is 5 Stars across breed on Terminal Index.

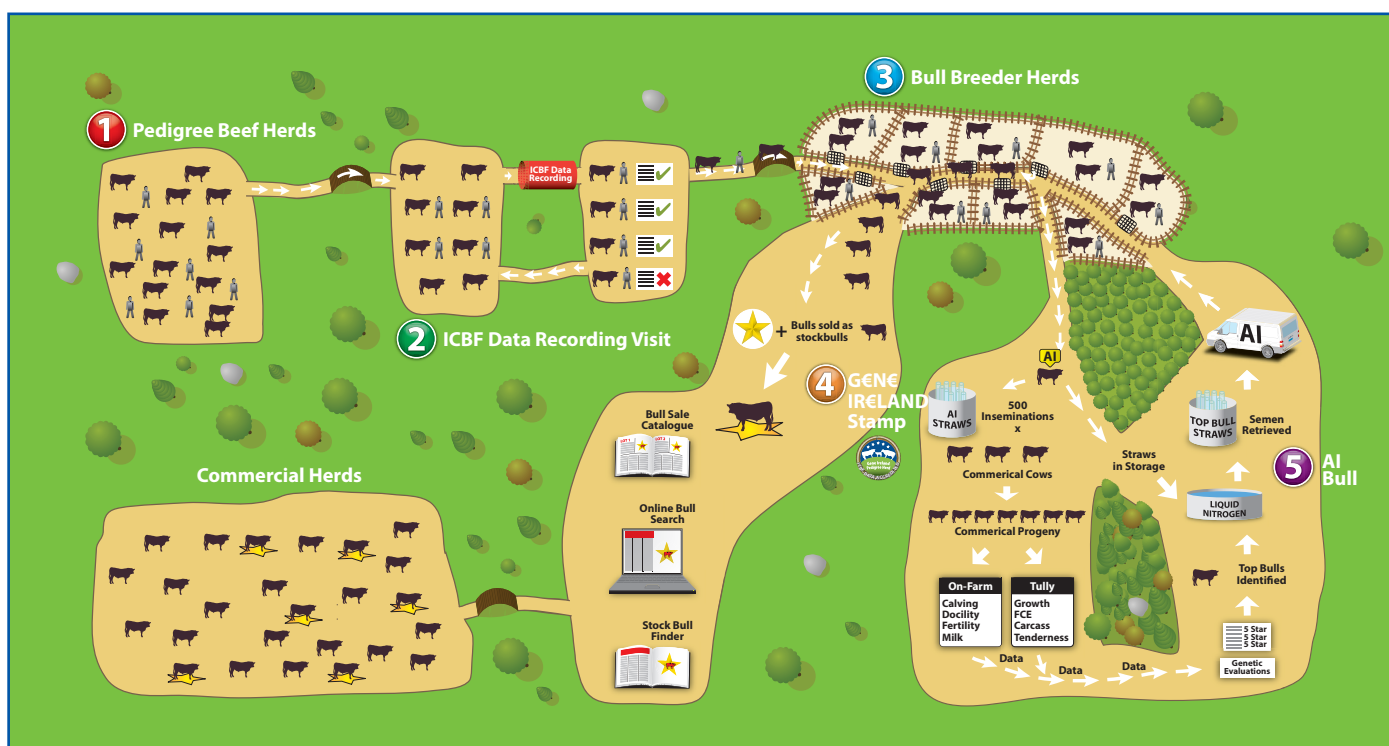

The Benefits

If you contact ICBF (023-8820452) and order semen from any of the bulls in this catalogue you will receive the following benefits:

- ❖ Access to the highest index new beef bulls in Irish AI at €7 per straw (technician charges may apply).
- ❖ Straws delivered to your own tank or the technician of your choosing.
- ❖ Progress towards meeting the scheme targets.
- ❖ Potentially sell some of the progeny back to ICBF for performance testing at the Tully Beef Test Centre.
- ❖ Freedom to choose whatever combination of bulls & breeds that you require from the catalogue.

Gene Ireland Overview

The diagram below gives an overview of both the design and operation of the Gene Ireland Beef program.

Autumn 2022 AI Birth Stats

The class of Autumn 2022, who sired them?

The second half of 2022 saw 169,954 suckler beef calves (beef sire x beef dam) born on Irish farms, of which 30,638 have been registered to an AI sire. This represents approximately 18% of all suckler beef calves born in the period. Below is a list of the top 10 AI sires of Autumn 2022 born suckler progeny based on sires recorded.

The Top 10 AI Sires with the most progeny recorded to them between 1/7/22 to 31/12/22.

Rank	AI Code	Name	Breed	Number of Progeny	Repl Index	Term Index	GI Sire
1	CH4321	Lapon	CH	2531	€98	€158	Yes
2	LM2014	Ewdenvale Ivor	LM	2137	€170	€154	Yes
3	LM4217	Moondharrig Knell	LM	1671	€167	€122	Yes
4	CH4159	Knockmoyle Loki	CH	1070	€107	€165	No
5	AA4089	Intelagri Matteo	AA	698	€166	€86	Yes
6	LM4184	Loyal	LM	692	€165	€131	No
7	AA4640	HW Farghal	AA	546	€112	€91	Yes
8	CH4160	Pottlereagh Mark	CH	544	€140	€137	No
9	BB4438	An De Beuffaux	BB	513	€52	€130	No
10	LM7416	Powerful Proper	LM	484	€126	€124	Yes

Evaluation based on the Jan 2023 evaluation.

These 10 sires account for 36% of all the AI suckler progeny born in the second half of 2022. The list is dominated by well proven Charolais and Limousin sires along with two Angus and one Belgian Blue. The 10 sires listed above have an average Replacement Index of €130 which is **5 Stars** across breeds with relatively high reliability across all the sires and very high in some cases.

Encouragingly, 7 of the 10 sires, and all the top 3, listed above have graduated from Gene Ireland over the years which highlights the value of the program for progeny testing young high impact sires. This helps to drive the rate of genetic gain by building high reliability indexes at a young age on the back of robust data recording. Every Spring and Autumn a new panel of young high genetic merit sires are made available to suckler farmers for just €7 per straw.

Gene Ireland User Profile

The McGrath family operate a full time suckler beef enterprise near Mitchelstown in Co Cork. 85 cows are calved in a 100% AI, closed herd spring calving system. An interesting feature of the herd is the fact that every animal in the herd is sired by an AI bull. The main breeds used are Charolais, Limousin and Simmental with some Salers and Angus also being used in recent years. The average Replacement Index of the cows in the herd is an impressive €110 - this compares to the national average of approximately €87. This high level of genetic merit is backed up with a hugely impressive set of KPIs for such a large herd. The most recent figures for the herd indicate an average calving interval of just 359 days with calves per cow per year running at 1.03.

William McGrath and family

The aim of the herd is to produce genetically balanced animals. As it is a closed herd, female calves need to be suitable for breeding or feeding whilst the male calves are required to generate a profit from a system that is run on purely commercial principles. Many animals from the herd have also been purchased for the Tully Test Centre over the years where they have consistently performed exceptionally well.

William has been using DIY AI for the last 15 years and the most recent calf crop saw 100% of the calves being sired by AI bulls. They have also been using Gene Ireland straws since the programme began back in 2007. The use of these Gene Ireland bulls forms a key part of the annual breeding plan on the farm. One of the most successful sires used over the years is Ewdenvale Ivor (LM2014). William has found that this 5 star bull ticks all the boxes for him in terms of easy calving, good growth rates and the daughters consistently turn into medium sized productive mothers.

Alongside Gene Ireland, the herd are also active participants in HerdPlus, BDGP and BEEP-S.

One of the standout cows in the herd is 372224671521041. Sired by the Gene Ireland tested Kickhams Handsome (SI4322), she was born in March 2019. This cow first calved at 24 months and has produced a calf each year with a lifetime average calving interval of just 359 days. Her 2022 born calf was a bull sired by the Gene Ireland bull Nebbiolo (LM3713). This calf was weighed for the BEEP-S scheme and was 294 kgs at 171 days. This calculates into a most impressive 1.45 kgs per day. The cow herself currently has a Replacement Index of €177 and weighed 665 kgs in August 2022. She is 5 stars across breed for Milk and Carcass Weight and is another example of what can be achieved in the suckler beef industry through a combination of genetics and top-class management.
