29 September 2024 (Q3)

New restrictions in the last 12 months Q3 2024

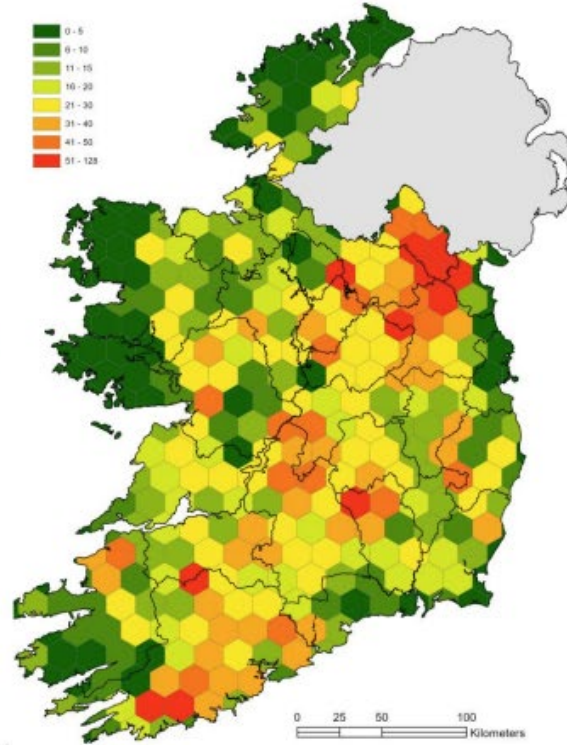

Reactors

37,964

(01 Oct 2023 – 29 Sep 2024)

25,916

(02 Oct 2022 – 01 Oct 2023)

Herds Restricted

5,712

(01 Oct 2023 – 29 Sep 2024)

4,868

(02 Oct 2022 – 01 Oct 2023)

Herd Incidence

5.62%

29 Sep 2024

4.73%

01 Oct 2023

5-year herd Incidence

2023 - **4.94%** 2022 - **4.31%** 2021 - **4.33%** 2020 - **4.38%** 2019 - **3.72%**

Expenditure Year to date ('000)

Total Expenditure end of Q3 2024

€66,196 Q3 2024

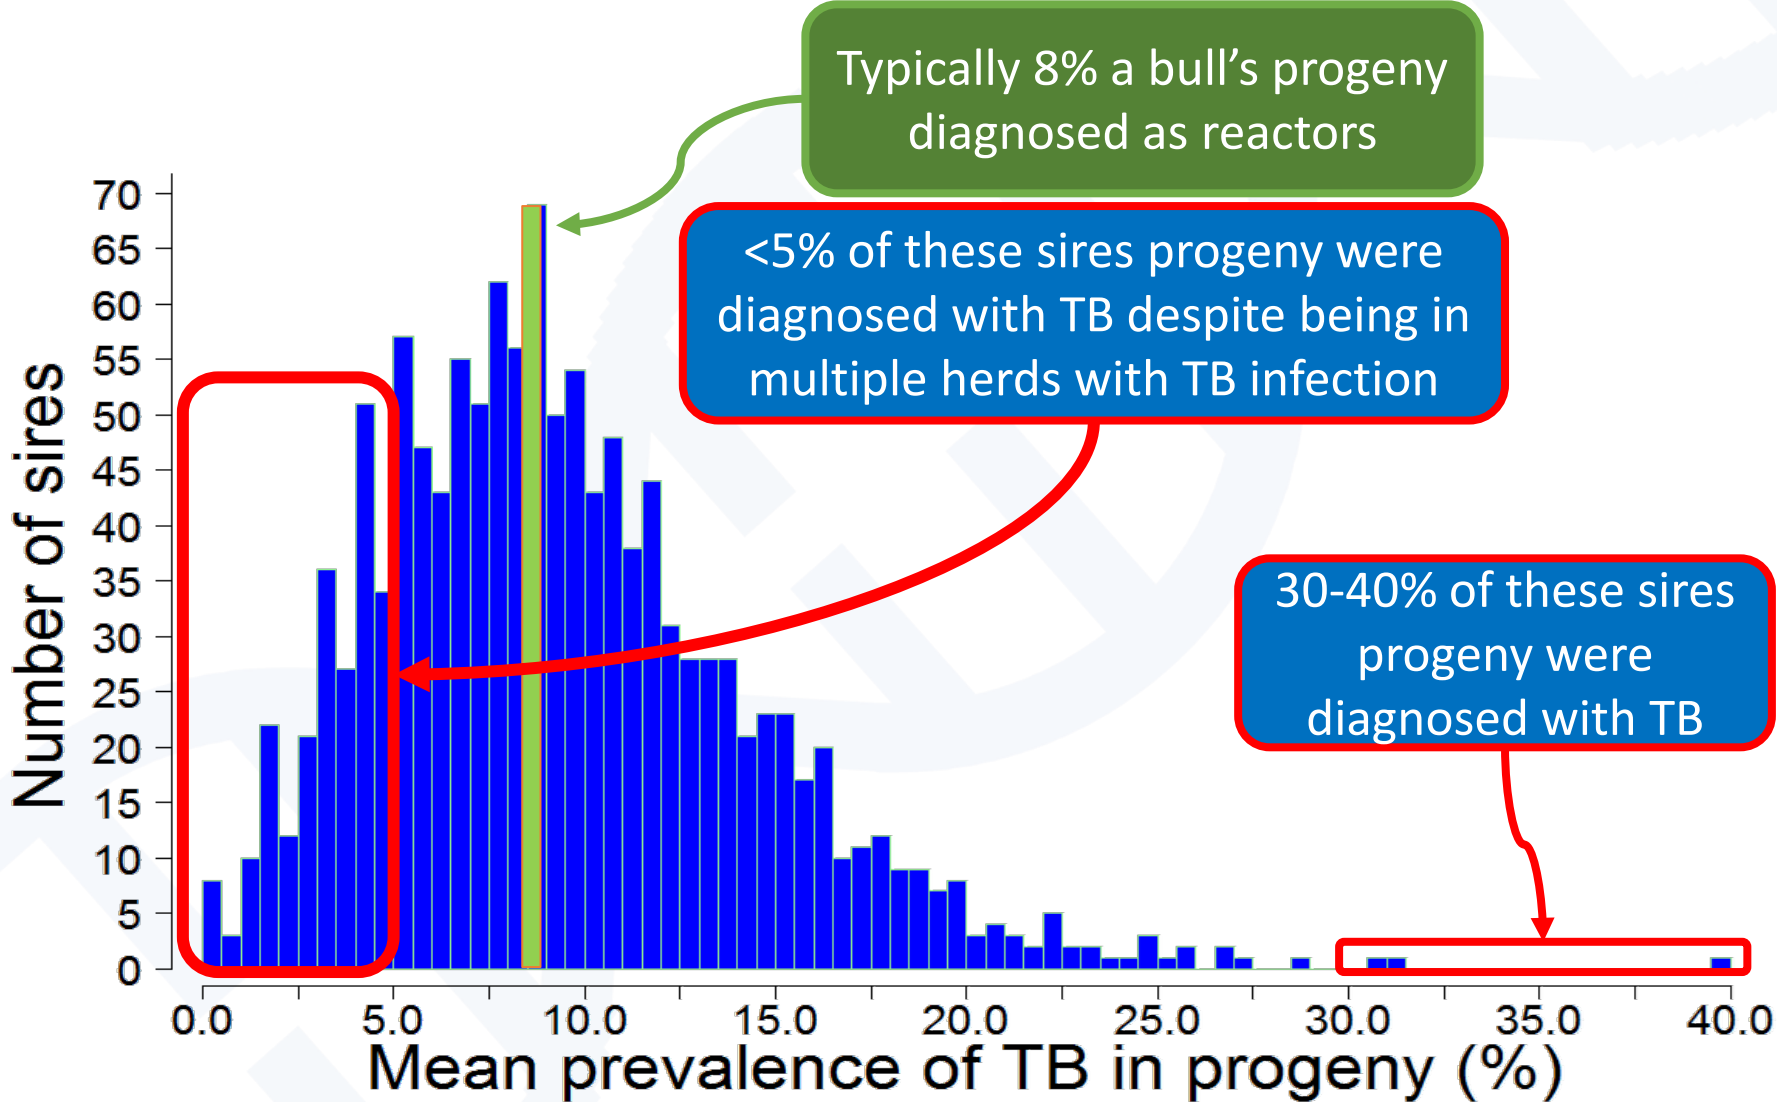

€48,749 Q3 2023

36%

Evidence of Genetic Resistance to TB in Cattle

Validation

Genetically high risk of TB+ result

Genetically low risk of TB+ result

Risk based on genetic make-up	Mean TB Incidence	Difference
Genetically high risk of TB+ result	9.3%	26% additional TB reactors in the high risk group
Genetically low risk of TB+ result	6.9%	

Genetic merit determined from ancestral data

Risk of a TB+ result derived from genetic merit

Cattle tested for TB throughout life

Analyses of test results confirm a higher incidence of TB in cattle deemed high risk because of their genetics

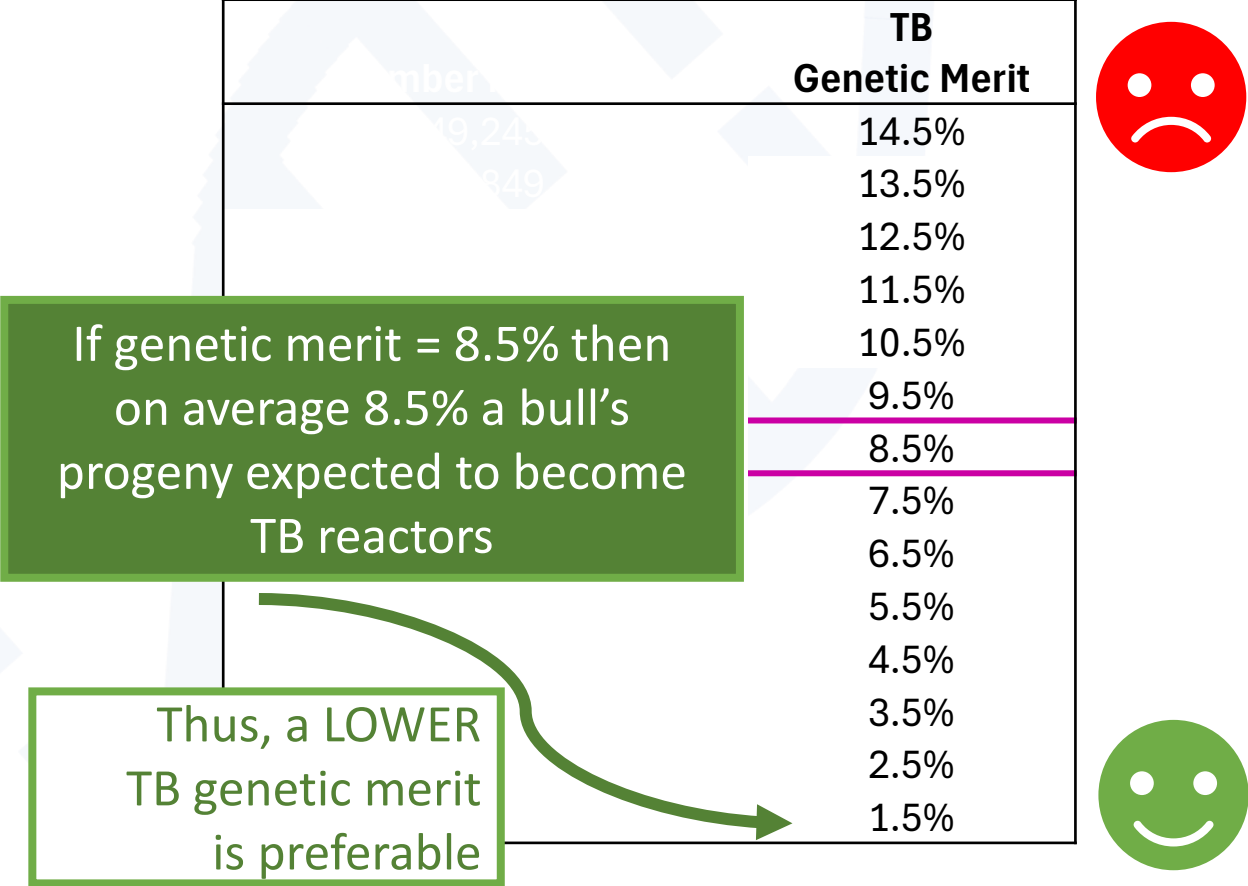

Timeline of analyses

Potential Impact of 2023 Bull Usage

Potential Gains for Breeding for TB Resistance

Potential Gains for Breeding for TB Resistance

Est. Number reactors	TB Genetic Merit
-------------------------	---------------------

28,868 reactors in 2023	8.5%
-------------------------	------

Impact of choosing calves based on TB PTA

- 1,000 high EBI calves (>€350 EBI), these categorised equally according to TB PTA:
 - Best, good, average, poor, worst

TB_rank	Mean TB	Max TB	EBI	Milk	Fert	Calv	Maint	Beef	Health	Manage	Carbon	Milk_kg	Fat_kg	Pro_kg	CIV	Surv
1. Best	5.3	6.5	€368	€86	€190	€49	€16	-€14	€21	€3	€18	28	15	10	-11.4	3.7
2. Good	6.8	7.5	€370	€91	€191	€50	€15	-€12	€15	€3	€17	29	15	11	-11.6	3.6
3. Average	7.7	8.5	€368	€88	€194	€51	€15	-€12	€12	€2	€18	9	15	10	-11.9	3.6
4. Poor	8.7	9.5	€368	€89	€197	€50	€16	-€14	€8	€2	€20	-14	15	10	-12.1	3.6
5. Worst	10.2	13.2	€366	€92	€197	€51	€15	-€12	€4	€2	€18	-3	15	10	-12.0	3.7

•Key Insights:

- No loss in genetic gain (EBI or associated traits)
- TB Genetic Merit Matters
- Must be cognizant of gene pool considerations

Summary

- Breeding for bTB resistance is a PROACTIVE not reactive solution
 - Think of it like vaccination
- Breeding values available on all animals
 - For your animals: download your Profile on ww.ICBF.com
 - For individual animals: use the animal search
 - For choosing bulls for breeding: use Active Bull List, AI bull files or AI company catalogues, ask your technician
- Choose high Index bulls with lowest TB value to minimise risk of TB reactors
 - Less than 8% all herds
 - Ideally less than 6.5%

**Genetics is cumulative
and permanent**
